Portfolio performance and risk report

2022-01-03 to 2024-11-26 | 756 observations | 252 periods per year | Synthetic sample data (examples/sample_prices_synthetic.csv)
Generated 2026-01-01 00:00 UTC

Total return	Annualised return	Volatility
22.66%	**7.05%**	**10.30%**

Sharpe	Sortino	Max drawdown
0.71	**1.05**	**-11.65%**

Wealth index (start = 1)

Drawdown

Drawdown details

Measure	Value
Maximum drawdown	-11.65%
Peak	2022-08-15
Trough	2023-04-10
Recovery	2023-11-15
Longest underwater spell	327 periods (recovered)
Current drawdown	-3.33%

Value at Risk and Conditional VaR (one period)

Confidence	Historical VaR	Historical CVaR	Parametric VaR	Parametric CVaR
95%	1.00%	1.32%	1.04%	1.31%
99%	1.54%	1.77%	1.48%	1.70%

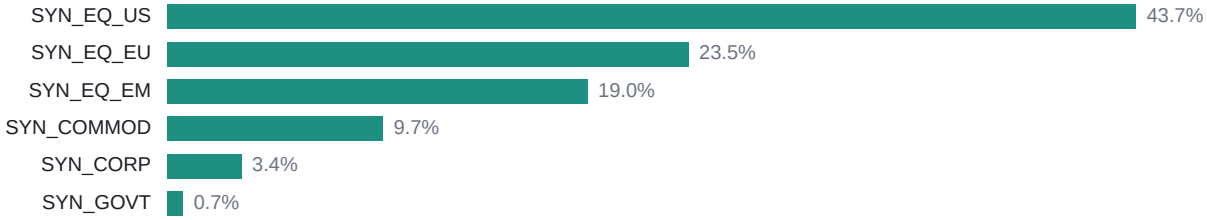
Shown as positive losses. Historical figures use the observed returns; parametric figures assume a normal distribution and understate fat tails.

Concentration (HHI) 0.205 | Effective positions 4.88

Assets

Asset	Weight	Return (ann.)	Volatility (ann.)	Max drawdown	Risk share
SYN_EQ_US	30.0%	11.79%	16.44%	-13.41%	43.7%
SYN_EQ_EU	15.0%	10.54%	17.65%	-15.80%	23.5%
SYN_EQ_EM	10.0%	9.03%	22.54%	-33.19%	19.0%
SYN_GOVT	25.0%	1.72%	5.97%	-14.49%	0.7%
SYN_CORP	10.0%	1.44%	7.30%	-15.60%	3.4%
SYN_COMMOD	10.0%	-0.71%	18.33%	-22.67%	9.7%

Share of portfolio risk



Correlation of asset returns

	SYN_EQ_US	SYN_EQ_EU	SYN_EQ_EM	SYN_GOVT	SYN_CORP	SYN_COMMOD
SYN_EQ_US	1.00	0.86	0.73	-0.17	0.29	0.32
SYN_EQ_EU	0.86	1.00	0.78	-0.10	0.33	0.39
SYN_EQ_EM	0.73	0.78	1.00	-0.09	0.32	0.49
SYN_GOVT	-0.17	-0.10	-0.09	1.00	0.56	-0.05
SYN_CORP	0.29	0.33	0.32	0.56	1.00	0.17
SYN_COMMOD	0.32	0.39	0.49	-0.05	0.17	1.00

Portfolio versus benchmark

Measure	Value
Beta	0.94
Alpha (annualised)	-0.21%
Correlation	0.91
R-squared	0.82
Active return (annualised)	-0.71%
Tracking error	4.39%
Information ratio	-0.16

Assumptions

- Returns are simple period returns, P(t) / P(t-1) - 1.
- Weights are constant, long-only and rebalanced to target every period; buy-and-hold drift is not modelled.
- Volatility and ratios are annualised with the square root of periods per year, which assumes returns are serially uncorrelated.
- VaR and CVaR are one-period losses shown as positive numbers; parametric figures assume a normal distribution and understate fat tails.
- Prices are assumed to be in one currency and adjusted for splits and dividends. This is not checked. No fees, taxes or dividends are modelled.
- Risk-free rate 0.00% annual (source not recorded).

This report describes the history that was supplied. It is an analytical output, not investment advice, and past results do not predict future performance. Value at Risk and related figures are estimates that depend on the sample and on the stated assumptions.
